KUSHAL BHOIR

Mumbai, India | +91 8767784520 | bhoirkushal2005@gmail.com | Portfolio | GitHub |LinkedIn

Summary

Results-driven data professional with expertise in Machine Learning, Deep Learning, and data analytics. Skilled in using Python and SQL for data processing, and Power BI, Tableau, and Excel for creating interactive dashboards and visualizations. Strong understanding of statistical analysis and predictive modelling, enabling the development of intelligent systems for real-world problems

Experience

Data Analysis Intern, BizTech **Feb 2026 – Mar 2026**

- Performed data cleaning and preprocessing on raw datasets
- Conducted EDA to analyse trends and patterns
- Built Power BI dashboards for data visualization a reporting

Education

University of Mumbai – B.Sc. Information Technology **Jul 2022 - Jun 2025**

Percentage: 8.33 CGPI

Pune University – Higher Secondary Education (HSC in Science) **Jul 2020 - Mar 2022**

Percentage: 60.00%

Pune University – Secondary Education (SSC) **Jun 2019 – Jul 2020**

Percentage: 76.80%

Projects / Course

QSpiders Global. Course | SQL **Aug 2024 – Aug 2025**

Hospital Management

- Designed and queried a relational database for managing patients, doctors, appointments, treatments, and billing.
- Wrote complex SQL queries using JOIN, GROUP BY, aggregate functions, and date filtering to generate reports like monthly revenue, doctor performance, and patient visit summaries. • Created analytical queries for billing reports, treatment costs, appointment tracking, and patient insights.

Imarticus Learning. Course | Data Analyst & Scientist **Aug 2025 – Apr 2026**

- **Data Analysis |HR Analysis (Python / Statistics / SQL / Power BI)**
  - Developed to identify key factors affecting employee attrition and performance.
  - Performed Exploratory Data Analysis (EDA) to identify trends, patterns, and anomalies.
  - Built interactive Power BI dashboards to track KPIs and business metrics.
  - Used SQL for data extraction, transformation, and analysis.
- **Data Science | Fake Job Detection System (Machine Learning / Deep Learning / NLP)**
  - Developed an intelligent system to identify fraudulent job postings from real job listings
  - Performed data cleaning, preprocessing, and text normalization using Python and NLP techniques
  - Extracted textual features using TF-IDF vectorization
  - Enhanced model performance using Deep Learning techniques such as LSTM
  - Evaluated model performance using Accuracy, Precision, Recall, and F1-score
  - Deployed the model using Gradio and Hugging Face for real-time prediction

Achievement / Activities

AI / Tech Solution - Nebulon Hackathon 2026

University of Mumbai / Team Matrix

Topic: SME Business Health & Insights Platform

- Led a team to develop an AI-powered solution for SME business insights
- Built ML model (Linear Regression) for inventory demand prediction
- Developed GenAI chatbot (LangChain, Llama 3.1) for no-code data analysis
- Used Python, Flask, Pandas, HTML, CSS, JavaScript
- Awarded Exceptional Performance

Skills

Programming: Python

Python Libraries: NumPy, Pandas, Matplotlib, Seaborn, Scikit-learn

Machine Learning: Supervised Learning & Unsupervised Learning

Deep Learning: ANN, CNN, RNN

Natural Language Processing (NLP): Text preprocessing, TF-IDF, Transformer

Databases: MySQL

Data Visualization: Power BI, Microsoft Excel, Tableau

Statistics: Descriptive Statistics, Inferential Statistics, Probability, Hypothesis Testing
